

PROTECT AGAINST MOLD, MILDEW & MOISTURE DAMAGE

Eliminate
Mold &
Mildew

POWERFUL PROTECTION

SUPERDRY's powerful and effective desiccants have been used in the commercial cargo industry for years to protect cargo from mold, mildew, and corrosion caused by high humidity in enclosed spaces. And now, **SUPERDRY**'s effective moisture absorbents are available for domestic applications such as homes and recreational type vehicles – including boats, yachts, mobile homes and caravans (Rvs).

SUPERDRY's special formula allows the desiccant to absorb up to 200% of its dry weight and converts the absorbed moisture into a dry and safe gel or "putty". This kit is suitable for boats and vehicles up to 10 m (35 ft) in length and will last from 1 to 6 months, depending on the ambient Relative Humidity and volume of space being protected.

SIMPLE AND EASY TO USE

- To activate the **SUPERDRY** unit, simply remove from the plastic wrapper.
- Place each unit in its desired location, the 1kg unit is more open and elevated position of the main area, and the 100gm units in smaller spaces such as drawers, electrical boxes, clothes cabinets, or cupboards – any place with moisture problems or the smell of mildew.
- When the desiccant is "full" it will increase in size and weight and have a firm rubber-like feel. Simply dispose of the desiccant as an ordinary waste.

INTELLIGENT DESIGN

SUPERDRY's Intelligent Design provides the most effective moisture control you can buy. It is safe, reliable and gives you two lines of defense.

- Our advanced outer layer allows moisture to flow in only one direction – once in, it cannot escape.
- Once absorbed, the active ingredient converts moisture into a firm and stable gel, eliminating spills and providing unparalleled protection.
